2.3.5. Teaching learning process nurtures creativity, analytical skills and innovation among students

The motto of “Learn to Excel” is well brought about in all aspects of teaching -learning in our Institution. A creative learning environment is provided through techniques like project-based learning and hands on training in the clinical aspects. The innovative mind of the students is kindled through the use of lab simulators and other preclinical and clinical models. The preclinical labs help the students to learn the know-how of the operative procedures well before they start with the treatment of patients. The post graduates also undertake preclinical training at an advanced level in their first year of the curriculum.

Innovation amongst the postgraduates is brought about in the research activities that are done during their course period. They undertake a small or minor project and a dissertation that has to be fulfilled as a part of their completion of curriculum. The design of the study and its execution helps to expand their horizon of knowledge. They also learn through symposiums, colloquiums and conferences.

The analytical skills are honed through experimental learning and interdisciplinary learning for both the undergraduate and postgraduate students. The optimal use of technology should help with their conceptual understanding than marring it. This taken care of by the faculties in the teaching - learning process of our Institution.
