Respected Sir,

As I'm doing my thesis on "To evaluate the effect of light curable fluoride releasing sealant and varnish on demineralized enamel using micro CT - an invitro study", The procedure requires the preparation of demineralization solution. I kindly request you to allow me to use the Department of Oral Pathology for the preparation of the same and also to change the solution once in 2 days for a period of 3 months.

Thanking You

GUIDE - DR. SHOBANA DEVI

HOD - DR. N.R. KRISHNASWAMY

## ACKNOWLEDGEMENT

*I would like to acknowledge and thank my beloved Professor and Head, Dr. N. R. Krishnaswamy, M.D.S., M. Ortho (RCS, Edin), D.N.B. (Ortho), Diplomate of Indian board of Orthodontics, Department of Orthodontics, Ragas Dental College and Hospital, Chennai. I consider myself extremely fortunate to have had the opportunity to train under him. His enthusiasm, integral view on research, tireless pursuit for perfection and mission for providing 'high quality work', has made a deep impression on me. He has always been a source of inspiration to strive for the better not only in academics but also in life. His patience and technical expertise that he has shared throughout the duration of the course has encouraged me in many ways.*

*I am privileged to express my extreme gratefulness to Professor Dr. Ranganathan MDS, PhD (Ohio) Head of Department, Department of Oral & Maxillofacial Pathology, Ragas Dental College & Hospital for his guidance which helped me during this study. His everlasting inspiration, encouragement, constructive criticism and valuable suggestions conferred upon me have encouraged me. I also extend my thanks to prof. Dr. Umadevi MDS, prof. Dr. Elizabeth MDS, prof. Dr. Rooban.T, MDS.*

*I am privileged to express my extreme gratefulness to Professor Dr. Rekha Bharadwaj MDS, M. Ortho RCPS (Glasgow), M. Ortho RCS,*

## Acknowledgement

(England), Diplomate of Indian board of Orthodontics, my Guide, my mentor without her proper guidance I wouldn't be able to complete my study. She gave me constant support from day one till the last day. Her everlasting inspiration, encouragement, constructive criticism and valuable suggestions conferred upon me have encouraged me.

My sincere thanks to Professor A. Kanakaraj, Chairman, Dr. N.S. Azhagarasan, Principal, Ragas Dental College for providing me with an opportunity to utilize the facilities available in this institution in order to conduct this study.

I would also like to acknowledge Dr. Sriram (Professor), Dr. M.K. Anand (professor), late Dr. G. Jayakumar (Professor), Dr. Shakeel Ahmed (Professor), Dr. Shobhana Devi (Reader), Dr. Premalatha (Reader), Dr. Kavitha S Iyer (Reader), Dr. Dhivya Lakshmi (Sr. Lecturer) and Dr. BharathRamesh (Sr.Lecturer) for their support, enthusiasm & professional assistance throughout my post graduate course.

I would like to mention my sincere gratitude to Dr. Lavanya, Reader, Dept of Oral Pathology and, Mr. A.A. Rajan, Technician, Oral Pathology, Dr.Christina & Dr. Hamsini for their great help and contribution for the dissertation.

My deep thanks to my wonderful batch mates, Dr. Divya, Dr. Deepak, Dr. GerardJeevan, Dr. Muthu pradeep, Dr. Nandini, Dr. Samin,

*Dr. Vaishnav who were cheerfully available at all times to help me. Their support and friendship was constant during these last years, and I deeply appreciate it.*

*I also extend my gratitude to my juniors Dr. Amil, Dr. Sundar, Dr. Asha, Dr. Karthik, Dr. Siddharth, Dr. Santhosh, Dr. Swathy, Dr. sreelekha, Dr. Abinaya, Dr. Nirnjana, Dr. Anu, Dr. Deepthi, Dr. Prince, Dr. praveen, Dr. Varuna, Dr. Amritha for their support.*

*I would like to thank Mr. Ashok, Mr. Manikandan, Mr. Bhaskar, Sister Lakshmi, Sister Yamini, Sister Kanaka, Mrs. Uma, the Scribbles team for their co-operation and help during my course of study*

*I would like to thank my seniors Dr. Amruthasree, Dr. M. Charles Finny, for their constant encouragement and support.*

*I would like to thank my Brother Mr. Dinesh Kumar and sister in law Mrs. Geetha Malini for their kind support to whom I am indebted forever. I would like to express my heartfelt love and gratitude to my parents Mr. K. Devarajan and Mrs. Bageerathi without whom this venture would have been impossible. I thank the most merciful and compassionate Almighty God, He guided and helped me throughout my life in every endeavor and for that I am grateful.*

## **ACKNOWLEDGEMENTS**

*"No love is greater than Mom's Love*

*No care is greater than Dad's Care"*

*I would like to extend my heartfelt thanks to my mom Mrs. K. Shanthamani and my dad Mr. G. Dhayanidhi for being such wonderful parents who have always been with me in my best times and also in worst times and I cannot explain how blessed I am to have such amazing parents in my life. I would also like to thank my little brother D. Aadharshann who always encourages me with his constant criticism.*

*I would like to acknowledge and thank my beloved Professor and Head, Dr. N. R. Krishnaswamy, M.D.S., M. Ortho (RCS, Edin), D.N.B. (Ortho), Diplomate of Indian board of Orthodontics, Department of Orthodontics, Ragas Dental College and Hospital, Chennai. I consider myself extremely fortunate to have had the opportunity to train under him. He is a great role model and is a source of inspiration to me to strive for the better not only in academics but also in life. To the world you may be just a teacher sir, but to your students you are a HERO!. I am extremely grateful to him for providing heartfelt support throughout my postgraduate programme and I have successfully overcome many difficulties with his personal attention.*

*I am extremely indebted to my guide Dr. Shobbana Devi M.D.S., (Reader) for her wonderful suggestions, motivation, encouragement and personal attention*

*which provided a good and smooth basis for the progress of this research. The guidance, constructive criticism, patience, perseverance and help rendered by her had benefited me enormously throughout this degree programme. Her special encouragement both academically and personally stimulated to bring the best out of me. She devoted her time with full involvement for making the thesis so wonderful. I take this opportunity to say heartfelt thanks for the great guidance and help without which this study would not have been possible.*

*My sincere thanks to Professor A. Kanakaraj, Chairman, Dr. N.S. Azhagarasan, Principal, Ragas Dental College for providing me with an opportunity to utilize the facilities available in this institution in order to conduct this study.*

*A good teacher knows how to bring out the best in students and I'm lucky to get trained under such wonderful teachers. I would like to acknowledge Dr. Sriram (Professor), Dr. M.K. Anand (Professor), Dr. G. Jaya Kumar (Professor), Dr. Shakeel Ahmed (Professor), Dr. Rekha Bharadwaj (Reader), Dr. Premalatha (Reader), Dr. Kavitha (Reader), Dr. Dhivya Lakshmi (Sr. Lecturer) and Dr. Bharath Ramesh (Sr. Lecturer) for their support, enthusiasm & professional assistance throughout my post graduate course.*

*I would also like to thank Dr. Rooban Thavarajah, M.D.S., (Professor), Department of Oral Pathology, Dr. Brinda (Lecturer) and my friend Dr. Bijivin*

*Department of Community Dentistry for their valuable suggestions during my statistical work.*

*I would also like to thank Dr. Malini and Mr. Vishwa for the technical support and guidance to obtain the results of this study.*

*My heartfelt thanks to my wonderful friends Dr. Charles, Dr. Gopinaath, Dr. Harish, Dr. Mathew, Dr. Rishi, Dr. Sam Prasanth, and Dr. Swathy who were cheerfully available at all times to help me and for their constant support and friendship.*

*I would like also extend my gratitude to my seniors Dr. Dhanalakshmi, Dr. Evan. A. Clement, Dr.R.Preeti, Dr.G.Preethi,Dr. Rajesh, Dr.Veerasankar.S, , Dr.Vidhu.S, Dr. B. N. Vineesha, juniors Dr. Amrutha Sree, Dr. Bajath, Dr. Grace Ruth, Dr. Kowtham Raj, Dr. Lily, Dr. Maryam, Dr. Vidhya and sub-juniors Dr. Divya, Dr. Deepak, Dr. Gerrad Jeevan, Dr.Muthu Pradeep,Dr. Nandhini, Dr. Pradeep Kumar, Dr. Sumin and Dr. Vaishnav for their support and help during this period.*

*I would like to thank Mr. Ashok, Mr. Manikandan, Mr. Bhaskar, Sister Lakshmi, Sister, Sister Yamini, Sister Kanaka, Mrs. Uma, Mrs. Sharadha and Mr.Thavamani and the Scribbles team for their co-operation and help during my course of study.*

### ABSTRACT

**Background:** The usage of mobile phone had been increased drastically which created a major health concern among the people about the radiation emitted from mobile phones. Hence this study was aimed to evaluate the Micronuclei (MN) frequency in exfoliated oral mucosal cells in high and low mobile users based on Specific absorption rate (SAR) value.

**Methods:** The total of 60 subjects were divided into two major groups: low SAR mobile phone users and high SAR mobile phone users. Further, Subjects who use mobile phone for more than 3 hours a week was considered as high talk time users and less than 3 hours a week was low talk time users. The buccal mucosa cells extracted by slightly scraping the oral cavity with a wooden spatula. For staining, Giemsa stain was used. Micronuclei were evaluated in 1000 cells per individual at the microscope.

**Results:** The result show prolonged talk time may interfere with the development of micronuclei in individuals who use mobile phone for more than 3 hours per week rather than high SAR value showing a significant increase in frequency of micronuclei formation.

**Conclusions:** The study showed mobile phone radiation had adverse effects on buccal mucosal cells.

**Keywords:** Mobile phone, Radiation, Micronuclei, Buccal mucosa

### INTRODUCTION

Over the past decade, the use of mobile phones has increased drastically. The rapid increase in the use of mobile phone has raised the health concerns about potential risks associated with exposure to electromagnetic fields produced by the mobile phone radiation.<sup>1</sup>

In India, according to Telecom regulatory authority of India, New Delhi, September 2019, total wireless Telephone Subscribers were 1168.31 Million with an increasing monthly growth rate of 0.24%.<sup>2</sup> As of present scenario, mobile phones are used at an enormous number by all the age-groups, particularly highest in the age group

of 25-34 years.<sup>3</sup> According to Dagli et al, it has been noted that an average person spends 90 min a day on their phone which is used not only for having conversations but also for various purpose.<sup>4</sup>

Mobile phones emit electromagnetic radiation in the microwave range 300 MHz and 300 GHz.<sup>2</sup> The rate at which the electromagnetic radiation is absorbed by human bodies is called as Specific Absorption Rate (SAR). It is a standardized unit which measures the impact of radio frequency electromagnetic waves on the human body and it is expressed as Watt/kg. The FCC (Federal Communication Commission) has limited the maximum legal SAR of any handheld cell device to 1.6 Watt/kg in India.<sup>5</sup>

According to International Agency for Research on Cancer, the mobile radiations are classified as Group-2B - possibly carcinogenic radiations i.e. there “could be some risk” of carcinogenicity.<sup>6</sup> This leads to the concern of possible adverse health effect on mobile phone users from exposure to electromagnetic radiation.

The possible oral cell changes, according to Fenech et al include DNA damage like micronuclei or nuclear buds, cytokinetic defects like binucleated cells, proliferative potential, and/or cell death have been related to a high risk of cancer, aging and to the carcinogenic process.<sup>7</sup>

The cytomorphological changes, such as micronuclei (MN), is indicative of genomic damage, are biomarkers of genotoxicity and can be tested in exfoliated cells, especially in oral mucosal cells.<sup>7</sup>

As a matter of fact, the oral mucosa is the tissue that is present close to mobile phone while in use and has chances to show possible genotoxic changes by the mobile phone radiation. Few authors like Daroit et al, Banerjee et al, have confirmed the genotoxicity of mobile radiation on oral mucosa, while authors like Ros-Llor et al, Hintzsche et al had apparently denied the genotoxic effect of mobile phone radiations.<sup>1,7,11,12</sup>

Considering all these mixed views, re-evaluation of the effect of mobile radiation on the oral epithelium is warranted. Hence this study was designed to evaluate the MN frequency in exfoliated oral mucosal cells in high and low mobile users based on SAR value.

## **METHODS**

The cross-sectional study was approved by the Institutional Ethical Committee and the samples were collected as per the ethical guidelines and with prior consent of mobile phone users. A pre tested structured questionnaire was filled up with information including demographic details, cell phone model, talk-time period for past 1 week, SAR of the model and brand in use, age, occupation, diet, disease (if any), addiction (if any), allergy etc. Exposed individuals included both males and females who use smart phone.

Sample size calculation was performed according to study conducted by Daroit et al.<sup>1</sup> Considering a study with an 80% power and  $\alpha=0.05$ , the minimum sample size was arrived as 54 individuals using G-POWER software version 3.1.

### ***Inclusion and exclusion criteria***

Subjects were selected in the age limit of 19-33 years, owning a mobile phone whose specific absorption rate was in the range of 0.1 to 1.6 watt/kg of body weight with mobile phone use for minimum of 5 years and who gave consent to participate were included in the study.

Subjects who had any history of long term medications, deleterious oral habits and subjects who used hands free devices like microphone or Bluetooth for voice calls were excluded from the study.

### ***Sample collection***

A total of 60 subjects between the age group of 19-33 years were selected. Participants were grouped into two groups based on the mobile SAR value (SAR value between 0.1 to 0.8 watt/kg (Group I) and SAR value between 0.9 to 1.6 watt/kg (group II)). Further these groups were sub grouped into low and high mobile talk time users. Low talk time users used mobile phone for less than three hours a week as talks time. The high mobile phone users, used mobile more than 3 hours a week as talk time.

### ***Scoring of micronuclei***

The criteria for identifying and scoring of Micronuclei (MN) were based on the proposed description by Tolbert.<sup>8</sup>

The MN has rounded smooth perimeter suggestive of the membrane. It stains in the same intensity as the nucleus. It is located within the cytoplasm of the cell, and usually, the diameter is 1/3 to 1/6 of the nucleus. It has texture similar to nucleus. It is located in the same focal plane as nucleus.

From each slide 1000 cells were observed under microscope under 400X magnification for MN identification.

### ***Smear collection***

The subjects were initially asked to rinse the mouth with water to remove the debris. Exfoliated cells from the buccal mucosa were collected using a moistened wooden spatula. An attempt was made to collect samples on the preferential side used during phone calls and the cells were spread evenly on clean microscopic glass slides and air dried. The samples were fixed using 95% isopropyl alcohol and the slides were stained with Giemsa staining. Giemsa stain is easy to prepare, less time consuming, reduces the effects of poor techniques and increases cell yield.

Quantification was performed by a single blinded and calibrated observer. The nuclear changes were quantified as follows: micronuclei (round or oval structures with well-defined borders, having 1/3 to 1/6 the diameter of the main nucleus, staining intensity and texture similar to that of the main nucleus, found in the same cytoplasm of the main nucleus.

### ***Statistical analysis***

The nonparametric Mann-Whitney test was used to compare values of micronuclei at the buccal mucosa and SAR and Kruskal -Wallis test was used to compare the value of micronuclei between low and high talk time users with in the group. The Spearman correlation coefficient

was used to analyse data on weekly cell phone use and on the count of nuclear changes and SAR. Statistical analysis was performed using the Statistical package for the social sciences (SPSS) version 20.0. The level of significance was set at 5%.

## RESULTS

We evaluated 60 healthy individuals. The study population consisted of 28.3% men and 71.7% women; mean age was 24.57 years, ranging from 19 to 33 years (Table 1).

**Table 1: Characteristics of the participants.**

Variables	N (%) (n=60)
<b>Male</b>	17 (28.3)
<b>Female</b>	43 (71.7)
<b>SAR</b>	
Low (0.1-0.8 watt/kg)	30 (50)
High (0.9-1.6 watt/kg)	30 (50)
<b>Talk time (each group)</b>	
Low (≤3 hours/week)	15 (25)
High (>3 hours/week)	15 (25)

**Table 2: Association between of specific absorption rate and talk-time in formation of micronuclei.**

	MN (Mean Rank)	P value	Correlation value	P value
<b>SAR</b>				
High SAR	21.02	0.000	0.551	<b>0.000</b>
Low SAR	39.98			
<b>TALK TIME</b>				
Low SAR low TT	19.10	0.000	0.619	<b>0.000</b>
Low SAR high TT	22.93			
High SAR low TT	32.20			
High SAR high TT	47.77			

SAR=specific absorption rate, TT= talk-time, \*non-parametric Man Whitney test and kruskal-Wallis test with spearman's correlation

The sample was divided into two groups based on the mobile SAR value (SAR value between 0.1 to 0.8 watt/kg (Group I) and SAR value between 0.9 to 1.6 watt/kg (group II)). Mean age was 24.63 years in the first group and 24.5 years in the second one. A statistically significantly higher number of micronuclei were observed in the buccal mucosa in the group that used mobile with high SAR value compared to individuals who owned mobile phone with low SAR value (Table 2).

Another analysis was performed by splitting the groups into low and high mobile talk-time users. Low talk time users used mobile phone for less than three hours a week as talk

time. The high mobile phone users, used mobile more than 3 hours a week as talk time. Significant differences were observed between the low & high talk time and the micronuclei count and Spearman's correlation was also performed to find the correlation between the SAR, talk time and micronuclei count (Table 2).

## DISCUSSION

The rapid growth in the number of mobile phone users has raised questions about possible biological effects of the radiation emitted by these gadgets. The buccal mucosa is located within an area exposed to radiation emitted by cell phones; therefore, it is important to investigate its effects on buccal mucosal cells. The findings of this study suggest that long-term exposure to cell phone radiation and high SAR value can slightly increase the frequency of micronuclei.

The primary aim of this study was to evaluate the cytotoxic effects caused by mobile phone radiation based on the specific absorption rate in the buccal mucosa. Since the buccal mucosal cells would be highly exposed to radiations while talking.

In this study micronuclei count in exfoliated buccal mucosal cells were used to evaluate the genotoxic effect of mobile phone radiation. MN count in the exfoliated cells can be used as a marker for an abnormal cell cycle as it is formed as a result of aberrant mitosis when the whole chromosome or chromatid fragment fails to reach the spindle pole. It is one of the best indicators of mitotic interference and chromosomal mutations or breakage.<sup>9</sup> The MN index is preferable for mass screening as it is rapid, simple, sensitive and cost-effective.<sup>10</sup> Hence, in the present study, MN index was used to analyse the genotoxicity caused by mobile phone usage based on the specific absorption rate. Counting of MN is very technique sensitive, and different staining methods cause significant variations for the evaluation of its frequency.<sup>11</sup> Hence, considering all the above factors, Giemsa staining was used to stain as it is single step, cost-effective procedure provides better stain intensity and fine cellular details and also supports the idea of utilizing this stain in oral exfoliative cytology for a decisive result.<sup>12</sup>

As stated in the result, MN count was found to be significantly higher in high SAR mobile phone users in comparison to low SAR users, and in the high talk time users, which directly indicates the genotoxic effect of prolonged mobile phone use for longer period. In our study, all probable causes for the increase in the MN count were excluded (tobacco, alcohol, recent medication, systemic factors etc.). Therefore, mobile phone radiation was expected to be the immediate and possible cause for the increased MN count in mobile phone users with high SAR, and the talk time of this finding was similar to various research groups.<sup>1,5,11</sup> On the contrary, other research groups have directly denied any significant increase of MN count in mobile phone users.<sup>7,13</sup> In this

study, the high and low mobile phone users were also evaluated by specific absorption rate of the mobile phone. This result indicates that when mobile phone used within the permissible range with the low SAR strength of radiofrequency radiation is not a major factor for genotoxic damage.

On the other hand, the increase in the micronuclei count can also be directly associated with localized hyperthermia.<sup>14</sup> So, the increased micronuclei count in subjects complaining of warmth around the ear may be synergistic effects of both mobile radiations induced genotoxicity and local thermal effects. In our study any visible oral mucosal changes were not observed but it should be taken into consideration that mobile phones are being used extensively by the general population and increased micronucleus count indicate that in future days it may cause visible oral lesions.

A study conducted by Kesari et al reported an increase in the MN count, caspase 3 levels and apoptosis rate in the mice model due to 3G mobile phone exposure for two hours a day for 60 days.<sup>15</sup>

Yadav and Sharma found an increased frequency of micronucleated exfoliated cells in 85 cell phone users compared to 24 non-users (controls).<sup>16</sup> Gandhi and Prabhjot also found a positive correlation between the number of micronuclei and increasing exposure to cell phone radiation, comparing 25 users with 25 controls.<sup>17</sup> Souza et al did not find any correlation between micronuclei and radiofrequency exposure; however, this study reports an increase of broken eggs in the group with greater exposure.<sup>18</sup> Meanwhile, the studies conducted by Hintzsche et al and Ros-Llor et al did not find such correlation.<sup>7,13</sup>

Previously studies have been reported on mobile phone radiations on Peripheral blood lymphocytes by Bisht et al, and Agarwal et al, showed harmful effects of cell phone radiation on sperm function and reactive oxygen species.<sup>19,20</sup> Non-thermal DNA breakage in human fibroblasts as well as rat granulosa cells in vitro due to exposure to cell phone radiations were also reported by Diem et al in 2005.<sup>21</sup>

In the present study Buccal Cytome Assay was done as described by Tolbert et al in 1992 are being reported and also the exposed individuals have been grouped according to the mobile phone SAR and talk time.<sup>8</sup> This is a direct in vivo study on the effect of cell phone radiations on buccal cells. Our results showed significant increase in the micronuclei in samples using high SAR mobile phone compared to the Low SAR mobile users, and the increase was directly proportional to the duration of calls, as seen.

The complete avoidance of the mobile phone technology is not possible in the present world scenario but with few precautionary steps such as: keeping the mobile phone away from the body when not in use; use of headphones

and bluetooth; keeping the phone in switched off mode when possible and mainly selecting a mobile phone of low SAR may help us to reduce the deleterious effects of mobile radiation.

## CONCLUSION

The results of our study showed significant increase in formation of micronuclei after exposure to mobile phone radiations. Also, a strong co-relation was observed between the micronuclei formation and mobile phone exposure time. Based on the present findings, we suggest that Mobile phones when used for prolonged periods can cause genotoxicity. Although according to the SAR values most of the mobile phones emit radiofrequency radiation within safety limit but the prolonged talk time may interfere with the development of micronuclei in individuals who use mobile phone for more than 3 hours per week rather than the high SAR value. This can be used as an endpoint to detect the cytotoxic damage in exposed individuals and this information can be helpful as an early sign of potential risk of genetic damage due to mobile phone radiation. Counselling and awareness of the mobile phone users becomes vital to protect them against damaging effects of mobile phone emitted radiations.

## CERTIFICATE

This is to certify that this dissertation titled "ASSESSMENT OF SALIVARY CORTISOL LEVELS AMONG PATIENTS WITH ORAL SQUAMOUS CELL CARCINOMA, POTENTIALLY MALIGNANT DISORDERS AND HEALTHY CONTROLS" is a bonafide record of work done by Dr. C.K.VISHNU PRIYA under my guidance during her postgraduate study period 2015 – 2018.

This dissertation is submitted to THE TAMILNADU Dr. M.G.R.MEDICAL UNIVERSITY, in partial fulfilment for the degree of MASTER OF DENTAL SURGERY, BRANCH IX – Oral Medicine & Radiology.

It has not been submitted (partial or full) for the award of any other degree or diploma.

## **ACKNOWLEDGEMENT**

*This dissertation is the result of a lot of effort that has gone in to its making and I wouldn't be justified if I do not acknowledge the people who stood beside me, helping me accomplish this task.*

*I owe my respectful gratitude to my guide **Dr. S. Kailasam, MDS, Professor and Head, Department of Oral Medicine and Radiology, Ragas Dental College**, for his valuable advice and encouragement during my postgraduate course. I am deeply grateful to him for his patience, support, and guidance during the study process, without whose intellectual insight, guidance in the right direction, this dissertation would not have been the light of the day. Sir, I solemnly express my deep felt gratitude for your valuable and great guidance and suggestions.*

*I thank **Dr.N.S.Azhagarasan, MDS, Principal** and **Dr.N.R.Krishnaswamy, MDS, Vice-principal, Ragas Dental College & Hospital** for their generous support rendered throughout my course.*

*My deepest and most sincere gratitude goes to **Dr. N.Santana, MDS, Professor**, for her valuable help and motivation during the course.*

*I express my deep sense of gratitude to **Dr. R.Sangeetha, MDS**, for being so tolerant, encouraging and understanding. I shall forever remain indebted to her for her over whelming help and meticulous care in correcting my mistakes with her valuable advice and friendly*

*encouragement without which I would have never accomplished this particular research.*

*I would like to extend my gratitude to **Dr. Massillamani MDS, Dr. Anand, MDS, Dr. Aparna and Dr. Malavika MDS, Reader, Department of oral medicine and radiology, Ragas Dental College, for helping me throughout my study, shaping up my clinical acumen and giving me constant support and encouragement.***

*I extend my heartfelt thanks to **Dr. Arthreya, Dr. Deivanayagi, Dr. Mammooty, Senior Lecturers, Department of oral medicine and radiology, Ragas Dental College, for helping me throughout my study and giving me constant support and encouragement.***

*I am very much thankful to **Dr. Vishwanathan, Radio Oncologists, Dr. Rai Memorial Hospital, Dr. Anand, Professor, IBMS, Dr. Pukazhenth, Statistician, Annamalai University, for their valuable help and kind support.***

*It would not be justifiable on my part if I do not acknowledge the help of my fellow colleagues **Dr. Lakshmi Nrusimhan, Dr. Niveditha, Dr. Priyadharshini** and my seniors, juniors for their extensive help and support throughout this study.*

***“I would like to thank all my Patients for their kind cooperation.”***

*I would like to especially thank my parents **Mrs. C.K. Lakshmi and Mr. C. Karunakaran** & my beloved sisters **C.K. Vanishree, C.K. Hemalatha,***

*C.K. Gomathy, C.K. Swapna for their love, understanding, support encouragement and their prayers throughout these years without which, I would not have reached so far. I would like to express my indebtedness for all the sacrifices they have made to see me succeed in my past, present and all my future endeavors.*

*I find no words to express my whole-hearted gratification to full-fledged support given by my friends **Dr. Poorani and R. Elanthiraiyan** who has been there with me through the most difficult times and helped me to complete the study.*

*Above all, I am thankful to **God** almighty, to have given me the strength to pursue this course and also to have given all these wonderful people in my life.*
