CARISK® – A SIMPLE MOBILE BASED APPLICATION FOR CARIES RISK ASSESSMENT:

CARISK® is a mobile application for assessing dental caries risk that could be used by non-medical individual patients in the absence of a professional, as well as during the pandemic, to help them assess their dental caries risk regularly to improve their utilization of available dental services. The questions for this mobile application were formulated based on the American Dental Association (ADA) Caries risk assessment form (2009) for both the age groups 0-6 and more than 6 years in both Tamil and English language. There were a total of 12 questions for the age group 0- 6 years and 18 questions for the age group more than 6 years. The questions were framed in such a manner that they can be understood by a non-medical professional. Pictures and explanations were given for certain questions so that they were able to understand the questions more clearly. In August 2021, CARISK® mobile application was developed as a prototype model (apk format). Dr. PD MADAN KUMAR, Dr. ANUSHA R, Dr. CANTY SANDRA S - Ragas Dental College and Hospital and BEZALEEL, Enlightns Wisdom Chennai were the collaborators. The data was fed into the software using JAVA and HTML source code. Here the output options were fed as A indicating low risk, B indicating medium risk, and C indicating high dental caries risk. If the participant clicks only on the low risk options the results will be shown as low risk. If the participant clicks both the low risk and moderate risk options the results will be shown as moderate risk and if the participant clicks the high risk options the results will be shown as high risk. This application was also registered in Copyright Office, Government of India.
